

Portfolio

Hello there!

My passion for developing in Node.js and building applications using Express stems from realizing the importance of backend architecture in the tech world.

I realize that clean and efficient code can greatly improve a user's interaction with a product and their overall user experience. This understanding helps me seek out and build the most productive and intuitive server solutions.

I enjoy turning complex processes into simple and straightforward server-side applications, making technology accessible to everyone. In addition, my basic knowledge of React and Redux allows me to better understand the interaction between client and server side applications, creating more harmonious and functional web systems.

Lobanovsky Ilya

MERN developer

Education

Third-year student, specialty "Software Engineering", Belarusian-Russian University, Mogilev.

Software skills

NODE.JS

EXPRESS

REACT

HTML, CSS

Additional skills

JavaScript (4 kyu - CodeWars)

C# (4 kyu - CodeWars)

MongoDB

Languages

Russian (native)

English (B1)
